

HOMEBREW AI CLUB

What Have You Built With AI?

In the 1970s, a group of hobbyists gathered to share their homemade computer projects. They called it the **Homebrew Computer Club**.

Today, we are living through another transformative moment.

Welcome to Homebrew AI Club.

A community for staff exploring, building, testing, and sharing practical applications of Generative AI.

Bring What You Are Working On

- Copilot agents and assistants
- AI-powered workflows
- Automated reports and documents
- Custom GPTs
- Research and productivity tools
- Prompt libraries
- Proofs of concept
- Experiments that failed but taught valuable lessons

How It Works

Show & Tell - Demonstrate something you built.

Share & Learn - Discuss what worked, what did not, and what comes next.

Connect & Collaborate - Meet others exploring AI across campus.

Our Philosophy

Show, do not just tell.

Share freely.

Celebrate curiosity.

Learn by building.

What if Homebrew Started Today?

The next transformative idea may not come from a tech company. It might come from a staff member who finds a better way to serve students, support research, improve operations, or solve a problem with AI. Let's discover those ideas together.

Date: _____

Time: _____

Location: _____

Interested in presenting? _____

Bring your ideas. Bring your experiments. Bring your curiosity.
Everyone Welcome.
